ONECLASS

School Management SaaS Platform

Complete Platform Reference — 25 Modules

A product of Logik Gates Pvt Ltd
Prepared for: Tapiwanashe Maposhere
Date: April 2026 — Version 2.0

1. Executive summary

OneClass is a comprehensive, multi-tenant educational SaaS platform designed for Zimbabwean schools. Built by Logik Gates Pvt Ltd, the platform aims to be a complete “school operating system” that digitises the entire school ecosystem from academic management through to fee collection, parent communication, and Ministry of Education reporting.

The platform targets primary and secondary schools across Zimbabwe (Government, Private, Mission, and Council) and is architected for offline-first operation. It supports trilingual interfaces (English, Shona, Ndebele) and integrates with local payment systems (EcoCash, OneMoney, InnBucks via Paynow).

1.1 Scope of this document

This document is the single reference for all OneClass platform decisions. It consolidates architectural discussions, module specifications, pricing models, and implementation plans from conversations spanning 2023–2026. It supersedes all previous partial documents.

1.2 Platform at a glance

- 25 modules across 5 development phases, plus 1 optional add-on
- Multi-context user model — one account works across schools and roles
- Offline-first architecture for rural Zimbabwe
- Trilingual: English, Shona, Ndebele
- Local payment integration: EcoCash, OneMoney, InnBucks, Paynow
- 3 SaaS subscription tiers: $3.50 / $5.50 / $8.00 per student per month
- 3 Care Package migration tiers: $2,800 / $6,500 / $15,000 one-time
- Target: MVP in 8 weeks, full platform in 32 weeks

2. Multi-context user model

A defining architectural feature of OneClass is that a single user account can operate across multiple institutions and roles. A person who is a parent at School A and a teacher at School B should log in once and switch contexts, loading the appropriate UI, permissions, and data for each role.

2.1 The problem

In Zimbabwe's education ecosystem, people frequently hold multiple roles. A teacher at a private school may have children enrolled at a different school. A Ministry official may also be a school board member. A parent may have children at two different schools. Forcing separate accounts for each context creates password fatigue, data silos, and poor user experience.

2.2 Identity architecture

The system separates identity (who you are) from context (where you are operating and in what capacity):

- User Account — One per person. Tied to a unique email or phone number. Holds personal profile data (name, national ID, contact details, photo). Authenticated once via Clerk or Supabase Auth.
- Context — A combination of institution + role. A user can hold multiple contexts. Each context grants a specific permission set and loads a specific UI.
- Active Context — The context currently in use. Switched via a context picker in the top navigation bar. Switching context reloads the sidebar, dashboard, and available data without requiring re-authentication.

2.3 Context switching

When a user logs in, the system checks all contexts associated with their account and presents the most recently used one. The context picker shows all available contexts with the institution name and role label:

- Example: "Mutare Primary — Teacher", "St. Mary's High — Parent", "Ministry of Education — Official"
- Switching context is instant — no page reload, no re-login. The UI shell (sidebar, header, permissions) swaps; the user identity persists.
- Data isolation is enforced at the database level — switching context changes the tenant filter on all queries. A teacher at School A cannot see data from School B even if they have an account there in a different role.

2.4 Role-context matrix

Role	UI loaded	Key permissions
Super Admin	Platform admin dashboard	All schools, all modules, user management, Care Package management, system config
School Admin	School admin dashboard	All modules within their school, staff management, fee config, reporting

Teacher	Teacher workspace	Classes assigned, markbook, attendance, lesson planning, communication with parents
Student	Student learning portal	Own grades, assignments, timetable, learning content, fee status
Parent/Guardian	Parent portal	Children's grades, attendance, fee statements, messaging with teachers
Ministry Official	Ministry dashboard	Read-only aggregated metrics across assigned schools/region, compliance reports

2.5 Cross-school scenarios

Parent with children at two schools: One account, two parent contexts. The context picker shows both schools. Fee payments, report cards, and messaging are scoped to the selected school. A unified "My Children" view aggregates basic status across all schools.

Teacher who is also a parent: One account with a Teacher context at School A and a Parent context at School B. Switching from teacher to parent swaps the entire UI from the teacher workspace to the parent portal.

Ministry official monitoring multiple schools: One account with a Ministry context. The dashboard aggregates data across all schools in their assigned region. They cannot access individual student records — only anonymised, aggregated metrics.

School admin at multiple campuses: One account with School Admin contexts at each campus. Each campus loads as its own tenant with its own data, staff, and configuration.

2.6 Technical implementation

- Database: user_contexts table linking user_id to school_id + role_id. A user can have multiple rows.
- API: Every request includes a context header (X-Context-Id) that determines the tenant filter and permission set.
- Frontend: Context state held in a global store (Zustand/Redux). Context switch triggers a re-fetch of sidebar config, dashboard data, and permission flags.
- Mobile (Flutter): Context picker accessible from app drawer. Offline data cache is per-context to avoid data leakage between schools.
- Invitation flow: When a school adds a parent or teacher, the system checks if the email/phone already exists. If yes, a new context is added to the existing account. If no, a new account is created with that context.

3. Technology stack

Layer	Technology
Frontend Web	React 18+ with TypeScript, TailwindCSS, ShadCN UI, Zustand state management, React Query, Vite
Mobile	Flutter (unified iOS/Android), offline-first with SQLite, sync queue, per-context data cache
Backend	Node.js with Express/Fastify, TypeScript, JWT authentication, context-aware middleware
Database	PostgreSQL with Prisma ORM and Row-Level Security, Redis (caching/sessions), IndexedDB (offline client)
Auth	Clerk or Supabase Auth, multi-context RBAC, 6 roles, invitation-based onboarding
AI	Anthropic/OpenAI APIs for lesson generation, report comments, adaptive learning, chatbot
Infrastructure	Cloudflare Workers + R2 Storage (primary), AWS (secondary), Railway/Fly.io staging
Payments	Paynow API (EcoCash, OneMoney), InnBucks, bank transfer, cash recording
Offline	Service workers, IndexedDB sync queues, conflict resolution (last-write-wins + manual merge)

3.1 Monorepo structure

- apps/web — React admin dashboard and all portal UIs (context-aware)
- apps/mobile — Flutter app (iOS/Android) with per-context offline cache
- apps/api — Backend API with context-aware middleware
- apps/jobs — Background workers (fee generation, reports, notifications)
- packages/database — Prisma schemas and migrations
- packages/shared — Shared utilities and TypeScript types
- packages/ui — Shared UI component library
- packages/zimbabwe-edu — Zimbabwe education constants (terms, grading, ZIMSEC)

4. Module inventory — 25 modules across 5 phases

Each module is described with its purpose, key features, dependencies, and Zimbabwe-specific requirements. Modules within a phase can be developed in parallel where dependencies allow.

Phase 1: Core foundation (MVP) (Weeks 1–8) — 6 modules

#	Module	Purpose & Key Features
1	**Platform admin & multi-tenancy**	Foundation layer handling school creation, licensing, RBAC (6 roles: Super Admin, School Admin, Teacher, Student, Parent, Ministry), academic year/term configuration, and onboarding workflows.
2	**Student information system (SIS)**	Complete student lifecycle management from admission through graduation. The most data-intensive module — all other modules reference student records.
3	**Academic management**	Configures the academic structure: what is taught, to whom, and when. Aligns to the ZIMSEC curriculum framework.
4	**Assessment & grading**	All assessment workflows from test creation through report card generation. Supports continuous assessment and terminal examinations.
5	**Attendance management**	Daily student attendance tracking with registers, absence notifications, and statistical reporting for compliance.
6	**Finance & billing**	Complete school financial management including fee structures, invoicing, payment collection (mobile money), receipts, and arrears tracking.

Module 1: Platform admin & multi-tenancy

Purpose: Foundation layer handling school creation, licensing, RBAC (6 roles: Super Admin, School Admin, Teacher, Student, Parent, Ministry), academic year/term configuration, and onboarding workflows.

Key features: Multi-tenant architecture with data isolation (shared DB + RLS), school creation wizard with branding, role-based permission matrix, three-term calendar setup, system-wide announcements, onboarding checklists, super admin dashboard, audit logging

Dependencies: None (foundation)

Zimbabwe-specific: Three-term calendar, school types (Government/Private/Mission/Council)

Module 2: Student information system (SIS)

Purpose: Complete student lifecycle management from admission through graduation. The most data-intensive module — all other modules reference student records.

Key features: Comprehensive profiles with photos, enrollment/admission workflow, guardian/parent linking, medical info and allergy tracking, academic progression history, document storage (certificates, IDs), disciplinary records, ZIMSEC candidate number tracking, bulk import (CSV/Excel)

Dependencies: Module 1

Zimbabwe-specific: ZIMSEC number integration, national ID/birth certificate references

Module 3: Academic management

Purpose: Configures the academic structure: what is taught, to whom, and when. Aligns to the ZIMSEC curriculum framework.

Key features: Curriculum setup aligned to ZIMSEC, subject management with teacher assignment, class/stream creation (e.g. Form 3A/3B), three-term system config, grade level

management (ECD through A-Level), O-Level/A-Level subject combinations, academic calendar with key dates

Dependencies: Modules 1, 2

Zimbabwe-specific: ZIMSEC syllabus alignment, ECD → Grade 7 → O-Level → A-Level progression, dual grading scales

Module 4: Assessment & grading

Purpose: All assessment workflows from test creation through report card generation. Supports continuous assessment and terminal examinations.

Key features: Digital gradebook with weighted assessments, assessment builder (MCQ/essay/practical), automated grade calculation per ZIMSEC scales, report card generation (customisable templates), performance trends per student, pass/fail rate tracking, comparative performance across terms, bulk mark entry, AI-generated teacher comments

Dependencies: Modules 2, 3

Zimbabwe-specific: ZIMSEC grading boundaries, term-based assessment cycles

Module 5: Attendance management

Purpose: Daily student attendance tracking with registers, absence notifications, and statistical reporting for compliance.

Key features: Daily attendance registers per class, absence categorisation (sick/excused/unexcused/late), automated parent notifications, attendance statistics and trends, teacher quick-entry interface (mobile-friendly), truancy detection and early warning, exportable records for Ministry reporting

Dependencies: Modules 2, 3

Module 6: Finance & billing

Purpose: Complete school financial management including fee structures, invoicing, payment collection (mobile money), receipts, and arrears tracking.

Key features: Flexible fee structures (tuition/levies/sport/boarding), per-term and per-year schedules, automated invoice generation, multi-payment support (cash/bank/EcoCash/OneMoney/InnBucks), Paynow API integration, receipt generation (print + digital), arrears tracking with automated reminders, financial reporting (income/cash flow), per-student account statements, bulk payment reconciliation

Dependencies: Modules 1, 2

Zimbabwe-specific: EcoCash/OneMoney/InnBucks, Paynow gateway, ZWG + USD dual currency

Phase 2: Daily operations (Weeks 9–14) — 4 modules

#	Module	Purpose & Key Features
7	**Timetable management**	Generates and manages school timetables including period allocation, room scheduling, and automatic substitution management.
8	**Teacher management**	Teacher profiles, qualifications, workload allocation, and performance tracking. Separate from HR (which handles contracts/payroll for all staff).
9	**Communication & notifications**	Unified communication hub for all stakeholder messaging with multi-channel delivery (SMS, email, push, in-app).
10	**Parent/guardian portal**	Self-service portal for parents to monitor academic performance, fee status, attendance, and communicate with teachers.

Module 7: Timetable management

Purpose: Generates and manages school timetables including period allocation, room scheduling, and automatic substitution management.

Key features: Timetable generation engine with constraint solving, period and lesson allocation, room/venue scheduling, automatic substitution management, teacher workload balancing, break/assembly configuration, conflict detection, printable/exportable timetables, per-student and per-teacher views

Dependencies: Modules 3, 8

Module 8: Teacher management

Purpose: Teacher profiles, qualifications, workload allocation, and performance tracking. Separate from HR (which handles contracts/payroll for all staff).

Key features: Teacher profiles with qualifications, subject/class assignment, workload allocation and tracking, substitution pool management, teaching performance analytics, professional development tracking, leave calendar integration, teacher self-service portal

Dependencies: Modules 1, 3

Zimbabwe-specific: Teaching certificate verification, Ministry registration numbers

Module 9: Communication & notifications

Purpose: Unified communication hub for all stakeholder messaging with multi-channel delivery (SMS, email, push, in-app).

Key features: Multi-threaded messaging (teacher ↔ parent, admin ↔ staff), SMS via local gateway, email delivery (SendGrid/local), push notifications (mobile), announcement broadcasting, newsletter builder, emergency protocols, notification templates with variables, automated triggers (fee reminders, absence alerts), message scheduling and delivery tracking

Dependencies: Modules 1, 2

Zimbabwe-specific: Local SMS gateway integration, low-bandwidth delivery

Module 10: Parent/guardian portal

Purpose: Self-service portal for parents to monitor academic performance, fee status, attendance, and communicate with teachers.

Key features: Child performance dashboard with grades/trends, attendance monitoring, financial statements and payment history, direct messaging with class teacher, school announcements and calendar, report card viewing/download, parent-teacher conference scheduling, digital consent form submission, multi-child support (view all children in one portal)

Dependencies: Modules 2, 4, 6, 9

Zimbabwe-specific: Mobile-first for feature phone access

Phase 3: Extended operations (Weeks 15–20) — 5 modules

#	Module	Purpose & Key Features
11	**Library management**	School library management including cataloguing, borrowing/returns, fines, and digital resource management.
12	**Boarding/hostel management**	For boarding schools — dormitory allocation, roll calls, leave management, meal planning, and boarding-specific fees.
13	**Transport management**	School transport including route planning, vehicle allocation, driver assignment, and transport fee management.
14	**Extracurricular activities**	Non-academic activities including sports, clubs, events, field trips, and student achievements.
15	**Asset & inventory management**	School physical assets (furniture, equipment, IT), maintenance schedules, depreciation, and procurement.

Module 11: Library management

Purpose: School library management including cataloguing, borrowing/returns, fines, and digital resource management.

Key features: Book catalogue with ISBN lookup, barcode/QR scanning for checkout, borrowing and return tracking, overdue notifications and fines, digital resource management (e-books/PDFs), reading list assignment by class/subject, inventory reports and stock-taking, reservation system

Dependencies: Modules 2, 3

Module 12: Boarding/hostel management

Purpose: For boarding schools — dormitory allocation, roll calls, leave management, meal planning, and boarding-specific fees.

Key features: Dormitory and room/bed allocation, boarder roll calls (morning/evening/lights-out), leave management (weekend/exeat/holiday), meal planning and dietary requirements, boarding fee management (separate from tuition), hostel inventory tracking, incident reporting, guardian notification for leave approval, capacity management and waitlisting

Dependencies: Modules 2, 5, 6

Zimbabwe-specific: Boarding school prevalence, exeat/weekend leave patterns

Module 13: Transport management

Purpose: School transport including route planning, vehicle allocation, driver assignment, and transport fee management.

Key features: Route creation and stop management, vehicle fleet tracking, driver assignment and scheduling, student-to-route allocation, pickup/drop-off time tracking, transport fee management (separate billing), parent notification of arrival/departure, route optimisation, vehicle maintenance scheduling

Dependencies: Modules 2, 6

Module 14: Extracurricular activities

Purpose: Non-academic activities including sports, clubs, events, field trips, and student achievements.

Key features: Sports team management and fixtures, club registration and membership, event planning and calendar integration, field trip organisation with consent management, achievement and awards tracking, photo/video gallery, resource allocation, inter-school competition management

Dependencies: Modules 2, 9

Module 15: Asset & inventory management

Purpose: School physical assets (furniture, equipment, IT), maintenance schedules, depreciation, and procurement.

Key features: Asset register with categorisation, asset tagging (barcode/QR), maintenance scheduling and work orders, depreciation tracking, procurement request workflow, supplier/vendor management, stock-taking and auditing, asset allocation to departments/rooms, disposal and write-off management

Dependencies: Module 1

Phase 4: Intelligence & content (Weeks 21–26) — 4 modules

#	Module	Purpose & Key Features
16	**Content management engine**	Centralised repository for curriculum-aligned learning materials with multi-format support and offline synchronisation.
17	**AI learning services**	Intelligence layer powered by LLM APIs: lesson plans, report comments, adaptive learning, and platform chatbot.
18	**Student learning portal**	Student-facing learning environment with personalised dashboards, gamification, and self-paced learning paths.
19	**Analytics & reporting engine**	Comprehensive analytics and BI serving all stakeholders with role-appropriate dashboards and custom report building.

Module 16: Content management engine

Purpose: Centralised repository for curriculum-aligned learning materials with multi-format support and offline synchronisation.

Key features: Multi-format content (PDF/video/audio/interactive HTML), ZIMSEC curriculum-aligned tagging, search by subject/grade/term/difficulty, offline content sync via service workers, teacher content upload and sharing, content approval workflow, version control, usage analytics

Dependencies: Module 3

Zimbabwe-specific: ZIMSEC syllabus mapping, offline-first delivery, low-bandwidth media optimisation

Module 17: AI learning services

Purpose: Intelligence layer powered by LLM APIs: lesson plans, report comments, adaptive learning, and platform chatbot.

Key features: AI lesson plan generation from syllabus topics, automated teacher report comments, adaptive learning path recommendations, performance prediction and intervention alerts, content recommendation engine, multilingual support (English/Shona/Ndebele), platform support chatbot, curriculum-aware question generation

Dependencies: Modules 3, 4, 16

Zimbabwe-specific: Trilingual generation (EN/SN/ND), ZIMSEC curriculum awareness

Module 18: Student learning portal

Purpose: Student-facing learning environment with personalised dashboards, gamification, and self-paced learning paths.

Key features: Personalised student dashboard, offline-first content access, gamification (badges/achievements/leaderboards), interactive assessments and practice tests, self-paced learning paths, digital report card viewing, assignment submission portal, study group collaboration

Dependencies: Modules 2, 4, 16

Zimbabwe-specific: Offline-first for rural connectivity

Module 19: Analytics & reporting engine

Purpose: Comprehensive analytics and BI serving all stakeholders with role-appropriate dashboards and custom report building.

Key features: Role-based analytics dashboards, custom report builder (drag-and-drop), scheduled report generation and distribution, data export (PDF/Excel/CSV), trend analysis and forecasting, comparative analytics (class vs class, term vs term), financial analytics and projections, performance heat maps, attendance pattern analysis

Dependencies: All Phase 1–3 modules

Phase 5: Platform maturity (Weeks 27–32) — 5 modules

#	Module	Purpose & Key Features
20	**Ministry dashboard**	Read-only dashboard for Ministry of Education officials providing aggregated metrics across all schools on the platform.
21	**Safety & compliance**	Legal and safety requirements: consent forms, medical profiles, incident reporting, privacy compliance, audit trails.
22	**Human resources & staff management**	All school staff (not just teachers): contracts, leave, payroll preparation, appraisals, qualifications.
23	**Care package / migration services**	Super admin module for managing professional migration services. Includes project management, team assignment, revenue tracking.
24	**System operations & DevOps**	Platform reliability: multi-tenant ops, backup/DR, monitoring, API management, and the offline synchronisation engine.

Module 20: Ministry dashboard

Purpose: Read-only dashboard for Ministry of Education officials providing aggregated metrics across all schools on the platform.

Key features: Aggregated performance metrics across schools, curriculum adoption tracking, school infrastructure and resource mapping, exportable compliance reports, policy impact assessment tools, regional/provincial performance comparisons, enrolment trend analysis, teacher-to-student ratio monitoring

Dependencies: Modules 1, 19

Zimbabwe-specific: Ministry of Primary and Secondary Education reporting, provincial education office hierarchy

Module 21: Safety & compliance

Purpose: Legal and safety requirements: consent forms, medical profiles, incident reporting, privacy compliance, audit trails.

Key features: Digital consent and indemnity forms, medical profile management (allergies/medications/conditions), incident reporting and investigation, privacy compliance (data protection), emergency contact management, safeguarding record keeping, audit trail for sensitive operations, data retention policy enforcement

Dependencies: Module 2

Zimbabwe-specific: Zimbabwe data protection regulations

Module 22: Human resources & staff management

Purpose: All school staff (not just teachers): contracts, leave, payroll preparation, appraisals, qualifications.

Key features: Staff contracts and employment records, leave management (annual/sick/maternity), payroll preparation and salary schedules, performance appraisal workflows, qualification and certification tracking, staff attendance and time tracking, recruitment and onboarding, organisational chart management

Dependencies: Module 1

Zimbabwe-specific: Zimbabwe labour law compliance, ZIMRA tax requirements

Module 23: Care package / migration services

Purpose: Super admin module for managing professional migration services. Includes project management, team assignment, revenue tracking.

Key features: Care package selection during onboarding, three-tier package management (Foundation $2,800 / Growth $6,500 / Enterprise $15,000), migration project tracking with phases, team workload and specialist assignment, data source tracking and validation, client communication logs, revenue analytics, post-migration support ticketing

Dependencies: Module 1

Module 24: System operations & DevOps

Purpose: Platform reliability: multi-tenant ops, backup/DR, monitoring, API management, and the offline synchronisation engine.

Key features: Multi-tenant architecture with data isolation, automated backup and disaster recovery, performance monitoring and alerting, API rate limiting and security, offline sync engine with conflict resolution, background job processing (fees/reports/notifications), platform usage analytics, health check dashboards, deployment and rollback management

Dependencies: None (infrastructure)

Zimbabwe-specific: Offline-first is critical for rural Zimbabwe

Optional add-on: Exam board system (Module 25)

Purpose: Standalone or integrated module for examination boards. Full exam lifecycle: registration → payment → sittings → grading → results → transcripts.

Key features: Student registration with candidate number generation, exam sitting management with status lifecycle (Draft → Open → Closed → In Progress → Completed), subject registration and fee management, payment recording with mobile money, bulk operations with 4-step pattern (Template → Upload → Validate → Confirm), mark entry (individual + bulk) with configurable grade boundaries, results approval workflow (Draft → Review → Publish), student self-service portal, transcript generation gated by payment status, multi-channel notifications, admin dashboard with KPIs, 21-page UI specification completed

Dependencies: Standalone or integrated with Modules 1, 2

Zimbabwe-specific: ZIMSEC grade boundaries, mobile money reconciliation

A complete 21-page UI specification for this module was produced in February 2026, covering 7 sub-modules (Student Registration, Exam Sitting Management, Payments & Billing, Results Management, Student Self-Service Portal, Notifications, Administration & Reporting) with a 21-page inventory across 5 roles. This is the most implementation-ready specification in the entire platform.

5. Zimbabwe-specific requirements

5.1 Education system constants

- Three-term system: Term 1 (Jan–Apr), Term 2 (May–Aug), Term 3 (Sep–Dec)
- Exam levels: Grade 7 Examinations, Ordinary Level (O-Level), Advanced Level (A-Level)
- Primary grading: A (80–100), B (65–79), C (50–64), D (40–49), U (0–39)
- Secondary grading: A (80–100), B (70–79), C (60–69), D (50–59), E (40–49), U (0–39)
- School types: Government, Private, Mission, Council
- Languages: English (primary), Shona, Ndebele

5.2 Payment methods

- EcoCash (Econet Wireless) — dominant mobile money platform
- OneMoney (NetOne), InnBucks, bank transfer, cash (manual recording)
- Integration via Paynow API

5.3 Connectivity

Offline-first architecture is mandatory, particularly for rural schools:

- Service workers for caching static assets and API responses
- IndexedDB for local data storage with sync queues
- Conflict resolution: last-write-wins with manual merge fallback
- Background sync when connectivity resumes
- Sub-3-second load times on 2G connections
- Data compression and image optimisation for low-bandwidth

6. SaaS subscription pricing

Plan	$/Student/Mo	Target	Example (200)	Gross margin
Starter	**$3.50**	50–300 students	$700/mo ($8,400/yr)	74%
Professional	**$5.50**	200–800 students	$1,100/mo ($13,200/yr)	88%
Enterprise	**$8.00**	500+ students	$1,600/mo ($19,200/yr)	93%

Starter includes: SIS, basic academic management, parent communication, manual fee tracking, simple reporting, 1GB/student storage

Professional includes: All Starter + advanced academics, financial automation (Paynow/EcoCash), library management, event management, custom reports, API access, 3GB/student

Enterprise includes: All Professional + predictive analytics, AI services, ZIMSEC integration, multi-campus, priority support, white-label, unlimited storage, dedicated account manager

6.1 Revenue projections

Year 1 (conservative): 85 schools, 23,500 students → $124,250 MRR → $1,491,000 ARR

Year 3 (growth): 275 schools, 82,500 students → $458,750 MRR → $5,505,000 ARR

7. Care package migration services

One-time professional migration fees, separate from subscription. Designed to solve the core adoption barrier: 95% of schools have data in Excel, paper, or legacy systems.

Package	Price (USD)	Target	Includes
Foundation	**$2,800**	50–200 students	Current-year records, 15 staff accounts, branding, 4hr training, 30-day support
Growth	**$6,500**	200–800 students	3-year history, financial data, 40 accounts, payment gateway, 12hr training, 90-day support
Enterprise	**$15,000**	800+ students	5+ year history, government integration, multi-campus, alumni DB, custom APIs, 24hr training, 6-month support

7.1 Payment options

- Full payment — 5% discount
- Split payment — 50% on contract, 50% on go-live
- Extended — Foundation: 3×$950, Growth: 6×$1,100, Enterprise: 12×$1,300

8. Development plan

8.1 Phase timeline

Phase 1 (Weeks 1–8): Core foundation — 6 modules. Platform admin, SIS, academic management, assessment, attendance, finance. This is the MVP.

Phase 2 (Weeks 9–14): Daily operations — 4 modules. Timetable, teacher management, communication, parent portal.

Phase 3 (Weeks 15–20): Extended operations — 5 modules. Library, boarding/hostel, transport, extracurricular, asset management.

Phase 4 (Weeks 21–26): Intelligence & content — 4 modules. Content engine, AI services, student learning portal, analytics.

Phase 5 (Weeks 27–32): Platform maturity — 5 modules. Ministry dashboard, safety/compliance, HR, care packages, system ops.

8.2 Development velocity targets

- 2 modules per week target
- MVP delivery: 8 weeks (Phase 1 complete)
- Full platform: 32 weeks
- 80%+ test coverage per module
- < 200ms API response time
- Offline sync success rate > 98%

8.3 Phase 1 sprint detail

Week 1–2: Platform admin + user management + multi-context auth + multi-tenant architecture

Week 3–4: Student information system + academic management

Week 5–6: Assessment & grading + attendance management

Week 7–8: Finance & billing + integration testing + MVP hardening

9. Status and what remains

9.1 Well-defined (ready for development)

- 25-module architecture with features, dependencies, and Zimbabwe-specific requirements
- Multi-context user model with identity/context separation
- Database patterns (PostgreSQL + RLS + multi-tenant)
- API patterns (context-aware middleware, JWT auth)
- Zimbabwe education constants and payment integration patterns
- Care Package pricing, migration workflow, and database schema
- SaaS subscription pricing with unit economics
- Exam Board UI specification (21 pages, 7 modules, fully specified)
- Monorepo structure and tech stack decisions

9.2 Partially defined (needs further work)

- Full relational database ERD across all 25 modules
- Complete OpenAPI specification for all endpoints
- Offline sync conflict resolution edge cases
- Ministry dashboard data aggregation pipeline
- Multi-campus architecture detail
- ZIMSEC API availability and data format specifics
- Context-switching animation and state management detail

9.3 Not yet addressed

- No production code written — all work is architecture and specification
- CI/CD pipeline configuration
- Security audit and penetration testing plan
- Data privacy compliance framework
- User acceptance testing plan and pilot school selection
- Go-to-market strategy beyond pricing
- Support infrastructure (helpdesk, knowledge base, training videos)
- Disaster recovery procedures and RTO/RPO targets
- App store submission strategy
- Exam Board → OneClass integration design (if used together)

9.4 Known risks

- Solo developer reality — development depends on you + Claude Code; the AI agent orchestration plan from earlier conversations was aspirational
- Pricing validation needed — $3.50–$8.00/student/month needs real-world testing with pilot schools

- Payment collection risk — schools struggle with fee collection, directly impacting SaaS revenue
- Offline-first complexity — true offline with conflict resolution is significantly harder than standard web apps
- Multi-context auth complexity — context switching adds significant testing surface area

10. Recommended next steps

1. Secure the brand. Register oneclass.co.zw, file trademark under Logik Gates Pvt Ltd, set up social accounts.

2. Start Phase 1. Use Claude Code with the monorepo structure. Target modules 1–2 in weeks 1–2 (admin + SIS + multi-context auth).

3. Identify 3–5 pilot schools. Government, private, and mission schools that can validate pricing and features.

4. Resolve backend choice. Node.js or Python — pick one. Clerk vs Supabase Auth — pick one. These cascade into everything.

5. Settle the Exam Board question. Standalone product or integrated module? This determines data model and deployment architecture.
